Flutter · MERN Stack · Firebase ·
Mobile & Web Engineering

PROFILE

Computer Science student (graduating Dec 2026) and self-taught developer with **3+ years of hands-on experience** building and shipping Flutter mobile apps and MERN web applications. Comfortable owning features end-to-end — from database schema design and API development to Flutter widget trees and React UIs. Strong grasp of **clean architecture, offline-first patterns, Firebase backend services, and performance profiling**. Looking for internship, junior-to-mid Flutter or full-stack engineering roles where I can contribute real work and keep growing fast.

EXPERIENCE

Flutter Developer

Jan 2023 – Present

◆ **Freelance & Contract Projects** Remote, Addis Ababa

Built and maintained multiple cross-platform Flutter applications from concept to deployment across Android and iOS, working directly with clients on requirements, scope, and delivery.

- ▶ Developed an AI-powered Tour & Travel app — structured the project with a feature-first folder architecture, used Riverpod for state, integrated a travel recommendation API, and built custom animated screens with smooth Hero transitions.
- ▶ Built a food recipe Flutter app with complex nested navigation, local Hive caching for offline access, and a custom search with debounce filtering — reduced API calls by ~60% during user search sessions.
- ▶ Engineered an SMS Forwarder Android app using Flutter platform channels to access native SMS APIs, forward messages to a backend webhook, and persist rules locally with SQLite.
- ▶ Integrated Firebase Auth (email/password, Google Sign-In), Firestore real-time listeners, and Cloud Messaging push notifications across 3 separate client projects.
- ▶ Applied Flutter DevTools profiling on a client app — identified and fixed widget rebuild issues that reduced frame render time from ~22ms to ~12ms, eliminating reported jank.
- ▶ Wrote widget and unit tests for core business logic using flutter_test; set up a basic GitHub Actions pipeline to run tests on each push.

Full-Stack Web Developer

Jun 2022 – Present

◆ **Personal & Client Projects** Remote, Addis Ababa

Designed and built full-stack web applications using the MERN stack, handling everything from MongoDB schema design and Express.js API development to React frontend and deployment.

- ▶ Built a Car Sales website with React, a Node/Express backend, and MongoDB — included vehicle listing CRUD, image upload with Multer/Cloudinary, and a basic admin panel for managing inventory.
- ▶ Developed a Full-Stack Registration System with JWT-based authentication, bcrypt password hashing, role-based access control (admin/user), and email verification flow using Nodemailer.
- ▶ Created a Quiz Builder Platform where instructors create question banks and students take timed quizzes — used MongoDB aggregations for score analytics and React Context for quiz session state.

- ▶ Built a Notes App with rich-text editing (React Quill), tag-based filtering, pagination, and a REST API with proper validation middleware and error handling.
- ▶ Deployed projects to Vercel (frontend) and Railway/Render (backend APIs), configured environment variables, and handled CORS, rate limiting, and basic security headers.
- ▶ Wrote Postman collections for all API endpoints and maintained basic README documentation for each project — made onboarding and testing significantly easier.

PROJECTS

▶ E-commerce Fashion Platform

Stack: *Flutter · Firebase · Provider · Firestore*

- ▶ Full-featured shopping app with product catalog, cart management, order flow, and Firebase Auth. Products and orders stored in Firestore with real-time updates.
- ▶ Implemented image caching with `cached_network_image`, skeleton loading screens, and pull-to-refresh — improved perceived performance noticeably on slower connections.
- ▶ Structured with a repository pattern separating Firestore data access from UI logic, making the codebase straightforward to extend and test.

▶ AI Tour & Travel App

Stack: *Flutter · Riverpod · REST API · Google Maps*

- ▶ Location-aware travel app that fetches nearby attractions and trip suggestions from a travel API, displays them on an integrated Google Maps view, and caches results locally.
- ▶ Managed async state with Riverpod (AsyncNotifier), handled API errors gracefully with user-facing fallback UI, and implemented infinite scroll pagination for attraction lists.
- ▶ Built a custom animated bottom sheet for place details with smooth spring physics using Flutter's `AnimationController`.

▶ Full-Stack Registration System

Stack: *Node.js · Express · MongoDB · React · JWT*

- ▶ REST API with user registration, login, JWT access/refresh token flow, bcrypt hashing, and role-based middleware. Frontend built in React with protected routes.
- ▶ Added email verification on signup (Nodemailer + token), and password reset flow with short-lived tokens stored in MongoDB with TTL indexes.
- ▶ Deployed API on Render, frontend on Vercel — documented all endpoints with Postman, including request/response examples.

▶ SMS Forwarder Android App

Stack: *Flutter · Platform Channels · SQLite · HTTP*

- ▶ Android app that intercepts incoming SMS messages using Flutter platform channels, matches them against user-defined rules stored in SQLite, and forwards matching messages to a configured webhook URL.
- ▶ Implemented a background service so forwarding works when the app is in the background — handled Android battery optimization exemption prompts.
- ▶ Built a simple rule management UI for non-technical users, with real-time forwarding status and a local activity log.

EDUCATION

BSc Computational Science

Expected Dec 2026

◆ **Addis Ababa University** Addis Ababa, Ethiopia

Relevant coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Software Engineering, Computer Networks.

A D D I T I O N A L

Open Source: Actively maintain public GitHub repositories with README docs, setup instructions, and code comments. Portfolio live at leul-dev.netlify.app.

Currently learning: Flutter Web, Supabase, advanced Flutter testing (integration_test), and basic system design concepts.

Interests: Mobile UX, developer tooling, open source, and contributing to dev communities online.
